## FEATURED PRODUCT

### L-9000™ Series FST Foaming Adhesives

Interior panel edge close out is a time and labor-intensive process. L&L Products' L-9000™ series foaming adhesives can be applied quickly and easily to trim honeycomb interior panel edges. Curing these products at a range of 250°F to 350°F, the L-9000™ foaming adhesives can expand from 100-500% of their original volume. This versatility allows for filling voids and providing an edge that can be finished to optimal fit and finish specifications.

The predictable post-cure density provides uniform material specification for your finished panels and can be saw-cut, laser-cut, milled, sanded or lathed, to meet your demanding fit and finish requirements. L-9000™ can also be potted into structures and provide local reinforcements.

Typical applications include: core splicing, edge close out, local edge reinforcement, radius enhancement, void filling, panel assembly, insert bonding, bracket bonding, in aircraft interiors.

DHSCo is an authorized North American partner for L&L Products. For additional product information please call our main office at 503-626-8979 or email us to: [sales@sutherland-pdx.com](mailto:sales@sutherland-pdx.com)
